

introducing the... **NB11L charger**

A simple, slow, but working charger for the
Canon NB-11L camera battery

Meet the Charger: TMone dev board, one dead project's PCB, one rubber band, and a camera battery that finally gets to charge again. My friend's camera came with no charger, so I gave the Sseed XIAO nRF a new job, charging the NB-11L straight off its built-in LiPo circuit. Same 3.7V chemistry, no TMextra parts needed. It's slow. It's chonky. It works.
